

GEM Specifications

- gem is a **crypto** based social media and events platform empowering everyone to create social events securely and safely with their **crypto wallet** by leveraging **blockchain** technology.
- We're **NEITHER** a trading platform **NOR** support any trading activities inside the platform
- gem has its own in-app token called gem token allows users to integrate with all gem features so we don't support any **ONCHAIN** token in our platform
- gem users can upload their artwork to create NFT from them:
 - create wallet
 - create private gallery
 - create collection
 - create artwork
 - mint artwork
- gem users get charged with the gas fee of creating collection and minting NFT forces them to pay the fee with their in-app token
- gem users can transfer gem tokens in form of NFT gift cards to their friends, they can create and take participate in gem social events by paying the entrance fee.
- gem doesn't store any private crypto information of its users, we scenically care about the security and safety of our users, they must save their **private key** some where cause we're using it a lot in the platform to make things safe and secure, as any other blockchain network **losing the private key cause the user to lose all his digital assets in the whole blockchain network!**
